Parents:

Note: Additional work needed on any circle facts on this page.

Example: $2+3 = 6$

6 is circled because it is not the answer of **$2+3$** . The correct answer should be **5**. Make giant flash cards for this problem and post them in obvious places around the house. Remember to do **$2+3=5$** and **$3+2=5$** at the same time. This reduces the number of facts from 100 to 50.

$2+3=5$
$3+2=5$

Post around the house and keep saying these facts until you know them.
